

Mitigating Business Risk and Improving Network Efficiency

Complete Managed Network Solutions for Business Continuity

Every organization faces significant risks when voice and data communications are interrupted. Productivity comes to a halt, transactions cannot be processed, critical applications go offline, and employees can't serve customers. In addition, a disabled network increases liability and fraud exposure and increases safety concerns.

Having a continuity of communications plan in place should minimize the risks of network downtime, and help organizations like yours focus on their core business. To be effective, it should meet some basic criteria:

- Provide cost effective broadband access for multiple applications
- Provide near 100% uptime per location
- Establish an always on, back up network that is 100% diverse from the terrestrial network
- Keep communications running with constant access to data, video, voice and radio, even when local network services are down
- Provide a solution that is easy to manage, deploy and operate on an ongoing basis

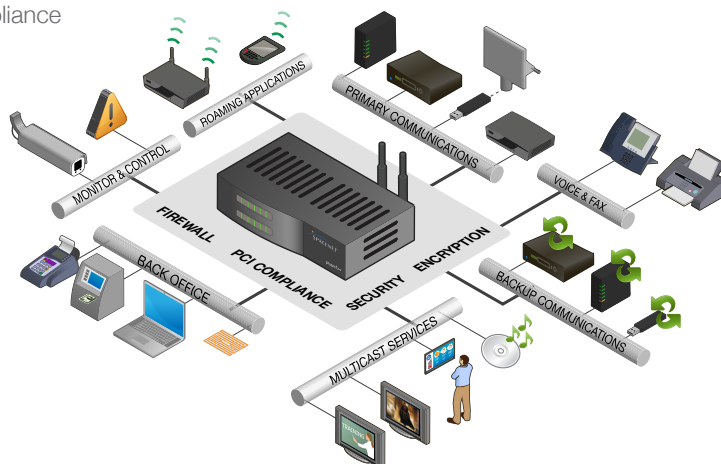

With Spacenet, a leading provider of broadband networks, organizations now have more options for cost-effective and reliable network backup. We make communications across locations easy, enable applications to perform optimally, and minimize lost revenue and additional costs from network downtime.

Spacenet benefits include:

- 30 years of network design and management experience
- Built-in network redundancy and backup solutions available
- Wide range of wireline and wireless technology solutions
- Dedicated customer support including 24X7 US based call center
- Comprehensive network operations with internal software development resources
- Quality & security standards to ensure data integrity and regulatory compliance
- "One Stop Shop" for all your managed networking needs

Spacenet's Managed Network Services provide cost-effective, reliable and seamless network backup – guaranteed!

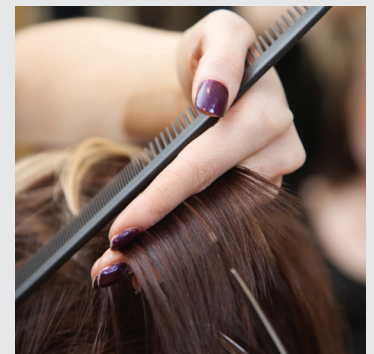

Our unique Prism Pro appliance supports advanced applications over wireline and wireless networks and provides a seamless solution for automatic network failover in the case of a primary network outage.

Case Study

Regis Corporation, the beauty industry's global leader in beauty salons, hair restoration centers and cosmetology education, is using Spacenet's Prism Pro at over 7,000 nationwide locations to support automatic hybrid switching between its wireline and wireless technologies for network backup.

In addition, it is simultaneously leveraging Prism Pro for integrated WiFi hotspot services for customers, integrated Analog Telephone Adapter (ATA) for VoIP functionality, and POS hardware for its retail applications.
