

## CONNEXSTAR DIGITAL PHONE

### Carrier Quality Telephone Service Over High Performance Satellite Broadband

Connexstar Digital Phone™ is available as an option with Spacenet's Connexstar *Performance Series* and select versions of the Connexstar *Broadband Series* satellite communications services. Connexstar Digital Phone provides commercial grade telephone and fax communications over Spacenet's very small aperture terminal (VSAT) satellite system with a direct connection to the Public Switched Telephone Network (PSTN). Digital Phone completes the Connexstar family of satellite based communication services enabling a single high performance wireless connection for voice, fax, video, and data communications for emergency response units, mobile command centers, remote industrial operations, or business continuity applications. Connexstar satellite services with Digital Phone are available in both fixed site and transportable packages and can be operated with either a stand alone Spacenet SkyEdge satellite modem or a Cisco VSAT Network Module integrated into select models of Cisco ISR routers.

#### Connexstar Digital Phone Advantages

- » **Easy Integration** – combined with Connexstar Performance or Broadband series of satellite communications services, Connexstar Digital Phone easily connects traditional analog phones or fax machines, as well as leading brand VoIP devices.
- » **Choice of Service Plans** – several flat rate nationwide airtime minute packages are available, enabling customers to select the plan that best fits their needs.
- » **Proven Technology** – Spacenet uses technology from Gilat Satellite Networks, the world's market share leader (>90%) in satellite telephony networks.
- » **High Quality Clear Calls** – the latest generation of advanced voice protocols and a sampling rate that is 3 times the industry standard provides a toll quality voice connection without jitter or dropped calls.
- » **Affordable Pricing** – Connexstar Digital Phone is very affordable with airtime charges often less than 10 percent of comparable mobile satellite phone services.
